

# Barrington Hydrant Flushing Program

The Utility Division of the Public Works Department conducts a semi-annual flushing of the water distribution system to eliminate as much mineral content as possible from the water supply. Fire hydrant flushing removes a considerable amount of the loose mineral contents and “settleable” solids that accumulate in the water supply system.

Fire hydrant flushing operations are conducted during the evening hours between 10:30 p.m. and 7:00 a.m. in order to eliminate some inconveniences such as potential low water pressure and discolored water. Customers may still experience a short period of discoloration during flushing and shortly after. Though water may be discolored, it is safe to drink. However, until the water runs clear, it is advisable to avoid washing clothes, especially white fabrics.
